

TRCA Flood Regulation & Floodlines — Buyer Reference Note

The Toronto and Region Conservation Authority (TRCA) regulates development near watercourses, valleys, shorelines, and flood-prone areas under Ontario Regulation 166/06 (Development, Interference with Wetlands and Alterations to Shorelines and Watercourses).

Property within a TRCA regulated area or Regulatory Floodline may require a TRCA permit before development, grading, or shoreline alteration. Permits can restrict additions, basements, and new structures, and may require flood-proofing.

Properties in or near the Regulatory Floodline can face higher property-insurance premiums, restricted or denied overland flood coverage, and added annual risk loadings for water damage and remediation.

The Don River, Humber River, and waterfront areas contain significant regulated floodplains. Buyers near these systems should confirm floodline status and insurability before closing.

Flood exposure is treated as an annual risk loading in the cost engine because it recurs every year of ownership, not just at purchase.
